

symptom: The following are the symptoms of hypertensive disease: pain chest, shortness of breath, dizziness, asthenia, fall, syncope, vertigo, sweating increased, palpitation, nausea, angina

pectoris, pressure chest disease: What are the symptoms of hypertensive disease?---

symptom: I am having the following symptoms: pain chest, shortness of breath, dizziness, asthenia, fall, syncope, vertigo, sweating increased, palpitation, nausea, angina pectoris, pressure chest.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hypertensive disease.---

symptom: The following are the symptoms of diabetes: polyuria, polydypsia, shortness of breath, pain chest, asthenia, nausea, orthopnea, rale, sweating increased, unresponsiveness, mental status

changes, vertigo, vomiting, labored breathing disease: What are the symptoms of diabetes?---

symptom: I am having the following symptoms: polyuria, polydypsia, shortness of breath, pain chest, asthenia, nausea, orthopnea, rale, sweating increased, unresponsiveness, mental status

changes, vertigo, vomiting, labored breathing. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with diabetes.---

symptom: The following are the symptoms of depressive disorder: feeling suicidal, suicidal, hallucinations auditory, feeling hopeless, weepiness, sleeplessness, motor retardation, irritable mood,

blackout, mood depressed, hallucinations visual, worry, agitation, tremor, intoxication, verbal auditory hallucinations, energy increased, difficulty, nightmare, unable to concentrate, homelessness

disease: What are the symptoms of depressive disorder?---

symptom: I am having the following symptoms: feeling suicidal, suicidal, hallucinations auditory, feeling hopeless, weepiness, sleeplessness, motor retardation, irritable mood, blackout, mood

depressed, hallucinations visual, worry, agitation, tremor, intoxication, verbal auditory hallucinations, energy increased, difficulty, nightmare, unable to concentrate, homelessness. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with depressive disorder.---

symptom: The following are the symptoms of coronary heart disease: pain chest, angina pectoris, shortness of breath, hypokinesia, sweating increased, pressure chest, dyspnea on exertion,

orthopnea, chest tightness disease: What are the symptoms of coronary heart disease?---

symptom: I am having the following symptoms: pain chest, angina pectoris, shortness of breath, hypokinesia, sweating increased, pressure chest, dyspnea on exertion, orthopnea, chest tightness.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with coronary heart disease.---

symptom: The following are the symptoms of pneumonia: cough, fever, decreased translucency, shortness of breath, rale, productive cough, pleuritic pain, yellow sputum, breath sounds decreased,

chill, rhonchus, green sputum, non-productive cough, wheezing, haemoptysis, distress respiratory, tachypnea, malaise, night sweat disease: What are the symptoms of pneumonia?---

symptom: I am having the following symptoms: cough, fever, decreased translucency, shortness of breath, rale, productive cough, pleuritic pain, yellow sputum, breath sounds decreased, chill,

rhonchus, green sputum, non-productive cough, wheezing, haemoptysis, distress respiratory, tachypnea, malaise, night sweat. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with pneumonia.---

symptom: The following are the symptoms of failure heart congestive: shortness of breath, orthopnea, jugular venous distention, rale, dyspnea, cough, wheezing disease: What are the symptoms of

failure heart congestive?---

symptom: I am having the following symptoms: shortness of breath, orthopnea, jugular venous distention, rale, dyspnea, cough, wheezing. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with failure heart congestive.---

symptom: The following are the symptoms of accident cerebrovascular: dysarthria, asthenia, speech slurred, facial paresis, hemiplegia, unresponsiveness, seizure, numbness disease: What are the symptoms of accident cerebrovascular?---

symptom: I am having the following symptoms: dysarthria, asthenia, speech slurred, facial paresis, hemiplegia, unresponsiveness, seizure, numbness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with accident cerebrovascular.---

symptom: The following are the symptoms of asthma: wheezing, cough, shortness of breath, chest tightness, non-productive cough, pleuritic pain, productive cough, symptom aggravating factors, distress respiratory disease: What are the symptoms of asthma?---

symptom: I am having the following symptoms: wheezing, cough, shortness of breath, chest tightness, non-productive cough, pleuritic pain, productive cough, symptom aggravating factors, distress respiratory. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with asthma.---

symptom: The following are the symptoms of myocardial infarction: pain chest, st segment elevation, sweating increased, shortness of breath, st segment depression, hypokinesia, angina pectoris, pressure chest, t wave inverted, orthopnea, rale, chest tightness, presence of q wave, palpitation, dyspnea, chest discomfort, bradycardia, syncope disease: What are the symptoms of myocardial infarction?---

symptom: I am having the following symptoms: pain chest, st segment elevation, sweating increased, shortness of breath, st segment depression, hypokinesia, angina pectoris, pressure chest, t wave inverted, orthopnea, rale, chest tightness, presence of q wave, palpitation, dyspnea, chest discomfort, bradycardia, syncope. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with myocardial infarction.---

symptom: The following are the symptoms of hypercholesterolemia: pain, pain chest, sweating increased, nonsmoker, pressure chest, syncope, numbness, chest discomfort, shortness of breath, st segment depression, worry, t wave inverted, bradycardia, dyspnea disease: What are the symptoms of hypercholesterolemia?---

symptom: I am having the following symptoms: pain, pain chest, sweating increased, nonsmoker, pressure chest, syncope, numbness, chest discomfort, shortness of breath, st segment depression, worry, t wave inverted, bradycardia, dyspnea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hypercholesterolemia.---

symptom: The following are the symptoms of infection: fever, erythema, decreased translucency, hepatosplenomegaly, chill, pruritus, diarrhea, abscess bacterial, swelling, pain, apyrexial, cough disease: What are the symptoms of infection?---

symptom: I am having the following symptoms: fever, erythema, decreased translucency, hepatosplenomegaly, chill, pruritus, diarrhea, abscess bacterial, swelling, pain, apyrexial, cough. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with infection.---

symptom: The following are the symptoms of infection urinary tract: fever, dysuria, hematuria, renal angle tenderness, lethargy, asthenia, hyponatremia, hemodynamically stable, distress respiratory, difficulty passing urine, mental status changes, consciousness clear disease: What are the symptoms of infection urinary tract?---

symptom: I am having the following symptoms: fever, dysuria, hematuria, renal angle tenderness, lethargy, asthenia, hyponatremia, hemodynamically stable, distress respiratory, difficulty passing urine,

mental status changes, consciousness clear. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with infection urinary tract.---

symptom: The following are the symptoms of anemia: consciousness clear, chill, guaiac positive, monoclonal, ecchymosis, tumor cell invasion, haemorrhage, pallor, asthenia, fatigue, heme positive, pain back, orthostasis, hyponatremia, dizziness, shortness of breath, pain, rhonchus, arthralgia, swelling, transaminitis disease: What are the symptoms of anemia?---

symptom: I am having the following symptoms: consciousness clear, chill, guaiac positive, monoclonal, ecchymosis, tumor cell invasion, haemorrhage, pallor, asthenia, fatigue, heme positive, pain back, orthostasis, hyponatremia, dizziness, shortness of breath, pain, rhonchus, arthralgia, swelling, transaminitis. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with anemia.---

symptom: The following are the symptoms of chronic obstructive airway disease: shortness of breath, wheezing, cough, dyspnea, distress respiratory, sputum purulent, hypoxemia, hypercapnia, patient non compliance, chest tightness disease: What are the symptoms of chronic obstructive airway disease?---

symptom: I am having the following symptoms: shortness of breath, wheezing, cough, dyspnea, distress respiratory, sputum purulent, hypoxemia, hypercapnia, patient non compliance, chest tightness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with chronic obstructive airway disease.---

symptom: The following are the symptoms of dementia: fever, fall, unresponsiveness, lethargy, agitation, ecchymosis, syncope, rale, unconscious state, cough, bedridden, pain, facial paresis, abdominal tenderness, rhonchus, unsteady gait, hallucinations auditory disease: What are the symptoms of dementia?---

symptom: I am having the following symptoms: fever, fall, unresponsiveness, lethargy, agitation, ecchymosis, syncope, rale, unconscious state, cough, bedridden, pain, facial paresis, abdominal tenderness, rhonchus, unsteady gait, hallucinations auditory. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with dementia.---

symptom: The following are the symptoms of insufficiency renal: shortness of breath, hyperkalemia, orthopnea, rale, urgency of micturition, ascites, guaiac positive, asthenia, apyrexial, mental status changes, dyspnea, difficulty, diarrhea, hypotension, breath sounds decreased, swelling, hypokinesia disease: What are the symptoms of insufficiency renal?---

symptom: I am having the following symptoms: shortness of breath, hyperkalemia, orthopnea, rale, urgency of micturition, ascites, guaiac positive, asthenia, apyrexial, mental status changes, dyspnea, difficulty, diarrhea, hypotension, breath sounds decreased, swelling, hypokinesia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with insufficiency renal.---

symptom: The following are the symptoms of confusion: seizure, enuresis, lethargy, speech slurred, fall, consciousness clear, mental status changes, asterixis, unconscious state, agitation, muscle twitch, asthenia, sleepy, dizziness, headache, dysarthria, lightheadedness, tremor, hyponatremia, unresponsiveness disease: What are the symptoms of confusion?---

symptom: I am having the following symptoms: seizure, enuresis, lethargy, speech slurred, fall, consciousness clear, mental status changes, asterixis, unconscious state, agitation, muscle twitch, asthenia, sleepy, dizziness, headache, dysarthria, lightheadedness, tremor, hyponatremia, unresponsiveness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with confusion.---

symptom: The following are the symptoms of degenerative polyarthritis: pain, food intolerance, numbness of hand, general discomfort, drowsiness, asthenia, nonsmoker, non-productive cough, polydypsia, stiffness, unsteady gait disease: What are the symptoms of degenerative polyarthritis?---

symptom: I am having the following symptoms: pain, food intolerance, numbness of hand, general discomfort, drowsiness, asthenia, nonsmoker, non-productive cough, polydipsia, stiffness,

unsteady gait. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with degenerative polyarthritis.---

symptom: The following are the symptoms of hypothyroidism: shortness of breath, prostatism, sleepy, hyponatremia, fall, unsteady gait, polyuria, hypotension, difficulty, syncope, nightmare, speech

slurred, weight gain, asthenia, tired, agitation, mental status changes, motor retardation, vomiting, numbness, mass of body structure disease: What are the symptoms of hypothyroidism?---

symptom: I am having the following symptoms: shortness of breath, prostatism, sleepy, hyponatremia, fall, unsteady gait, polyuria, hypotension, difficulty, syncope, nightmare, speech slurred, weight

gain, asthenia, tired, agitation, mental status changes, motor retardation, vomiting, numbness, mass of body structure. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with hypothyroidism.---

symptom: The following are the symptoms of anxiety state: worry, feeling suicidal, suicidal, sleeplessness, feeling hopeless, irritable mood, tremor, blackout, weepiness, has religious belief,

nervousness, hallucinations visual, formication, difficulty, pain chest, patient non compliance, agitation, palpitation, hallucinations auditory, mood depressed, hot flush, pain, consciousness clear,

nightmare disease: What are the symptoms of anxiety state?---

symptom: I am having the following symptoms: worry, feeling suicidal, suicidal, sleeplessness, feeling hopeless, irritable mood, tremor, blackout, weepiness, has religious belief, nervousness,

hallucinations visual, formication, difficulty, pain chest, patient non compliance, agitation, palpitation, hallucinations auditory, mood depressed, hot flush, pain, consciousness clear, nightmare. What

could be the disease ? disease: The symptoms listed indicates that the patient is dealing with anxiety state.---

symptom: The following are the symptoms of primary malignant neoplasm: pain, mass of body structure, lesion, cushingoid habitus, emphysematous change, decreased body weight, ascites,

hoarseness, thicken, hematuria disease: What are the symptoms of primary malignant neoplasm?---

symptom: I am having the following symptoms: pain, mass of body structure, lesion, cushingoid habitus, emphysematous change, decreased body weight, ascites, hoarseness, thicken, hematuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with primary malignant neoplasm.---

symptom: The following are the symptoms of hiv infections: fever, night sweat, spontaneous rupture of membranes, cough, , decreased body weight, chill, diarrhea, pleuritic pain, patient non

compliance, tachypnea, productive cough, hypotonic, feeling suicidal disease: What are the symptoms of hiv infections?---

symptom: I am having the following symptoms: fever, night sweat, spontaneous rupture of membranes, cough, , decreased body weight, chill, diarrhea, pleuritic pain, patient non compliance,

tachypnea, productive cough, hypotonic, feeling suicidal. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hiv infections.---

symptom: The following are the symptoms of cellulitis: erythema, pain, swelling, redness, fever, abscess bacterial, patient non compliance, hypesthesia, hyperacusis, pruritus, pain chest, scratch marks,

chill, sore to touch disease: What are the symptoms of cellulitis?---

symptom: I am having the following symptoms: erythema, pain, swelling, redness, fever, abscess bacterial, patient non compliance, hypesthesia, hyperacusis, pruritus, pain chest, scratch marks, chill,

sore to touch. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with cellulitis.---

symptom: The following are the symptoms of gastroesophageal reflux disease: pain, pain chest, burning sensation, hyponatremia, satiety early, throbbing sensation quality, chest tightness, sensory

discomfort, presence of q wave, nausea, general discomfort, constipation, palpitation, pain abdominal, heartburn, sweating increased, asthenia   disease: What are the symptoms of gastroesophageal reflux disease?---

symptom: I am having the following symptoms: pain, pain chest, burning sensation, hyponatremia, satiety early, throbbing sensation quality, chest tightness, sensory discomfort, presence of q wave, nausea, general discomfort, constipation, palpitation, pain abdominal, heartburn, sweating increased, asthenia. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with gastroesophageal reflux disease.---

symptom: The following are the symptoms of sepsis (invertebrate): fever, distress respiratory, hypotension, tachypnea, chill, lethargy, bradycardia, breech presentation, cyanosis, spontaneous rupture of membranes, haemorrhage, unresponsiveness, rale, apyrexial   disease: What are the symptoms of sepsis (invertebrate)?---

symptom: I am having the following symptoms: fever, distress respiratory, hypotension, tachypnea, chill, lethargy, bradycardia, breech presentation, cyanosis, spontaneous rupture of membranes, haemorrhage, unresponsiveness, rale, apyrexial. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with sepsis (invertebrate).---

symptom: The following are the symptoms of deep vein thrombosis: swelling, pain, ecchymosis, shortness of breath, pain in lower limb, cardiomegaly, rale, erythema, hypotension, clonus, non-productive cough, redness   disease: What are the symptoms of deep vein thrombosis?---

symptom: I am having the following symptoms: swelling, pain, ecchymosis, shortness of breath, pain in lower limb, cardiomegaly, rale, erythema, hypotension, clonus, non-productive cough, redness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with deep vein thrombosis.---

symptom: The following are the symptoms of dehydration: diarrhea, vomiting, hypotension, nausea, lightheadedness, unwell, mental status changes, anorexia, asthenia, sensory discomfort, syncope, lethargy, dizziness, history of - blackout   disease: What are the symptoms of dehydration?---

symptom: I am having the following symptoms: diarrhea, vomiting, hypotension, nausea, lightheadedness, unwell, mental status changes, anorexia, asthenia, sensory discomfort, syncope, lethargy, dizziness, history of - blackout. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with dehydration.---

symptom: The following are the symptoms of neoplasm: mass of body structure, lesion, pain chest, hematuria, tumor cell invasion, pain, anosmia, thicken, metastatic lesion, food intolerance, decreased body weight, night sweat, hemianopsia homonymous, satiety early, pain abdominal, headache   disease: What are the symptoms of neoplasm?---

symptom: I am having the following symptoms: mass of body structure, lesion, pain chest, hematuria, tumor cell invasion, pain, anosmia, thicken, metastatic lesion, food intolerance, decreased body weight, night sweat, hemianopsia homonymous, satiety early, pain abdominal, headache. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with neoplasm.---

symptom: The following are the symptoms of embolism pulmonary: shortness of breath, hypoxemia, tachypnea, hematocrit decreased, pain chest, dyspnea, pleuritic pain, neck stiffness, yellow sputum, productive cough, cicatrisation, unresponsiveness, distress respiratory, wheezing, apyrexial, non-productive cough   disease: What are the symptoms of embolism pulmonary?---

symptom: I am having the following symptoms: shortness of breath, hypoxemia, tachypnea, hematocrit decreased, pain chest, dyspnea, pleuritic pain, neck stiffness, yellow sputum, productive cough, cicatrisation, unresponsiveness, distress respiratory, wheezing, apyrexial, non-productive cough. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

embolism pulmonary.---

symptom: The following are the symptoms of epilepsy: seizure, hypometabolism, aura, muscle twitch, drowsiness, tremor, unresponsiveness, hemiplegia, myoclonus, gurgle, sleepy, lethargy,

wheelchair bound disease: What are the symptoms of epilepsy?---

symptom: I am having the following symptoms: seizure, hypometabolism, aura, muscle twitch, drowsiness, tremor, unresponsiveness, hemiplegia, myoclonus, gurgle, sleepy, lethargy, wheelchair

bound. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with epilepsy.---

symptom: The following are the symptoms of cardiomyopathy: shortness of breath, orthopnea, hypokinesia, jugular venous distention, palpitation, pain chest, syncope, yellow sputum, rale, dyspnea,

dyspnea on exertion, left atrial hypertrophy, fatigue, weight gain, patient non compliance disease: What are the symptoms of cardiomyopathy?---

symptom: I am having the following symptoms: shortness of breath, orthopnea, hypokinesia, jugular venous distention, palpitation, pain chest, syncope, yellow sputum, rale, dyspnea, dyspnea on

exertion, left atrial hypertrophy, fatigue, weight gain, patient non compliance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with cardiomyopathy.---

symptom: The following are the symptoms of chronic kidney failure: vomiting, orthopnea, hyperkalemia, oliguria, jugular venous distention, nausea, shortness of breath, mental status changes,

diarrhea, asthenia, chest tightness, malaise, chill, rale, fever, pleuritic pain, apyrexial, guaiac positive, swelling, catatonia, unresponsiveness, yellow sputum disease: What are the symptoms of chronic

kidney failure?---

symptom: I am having the following symptoms: vomiting, orthopnea, hyperkalemia, oliguria, jugular venous distention, nausea, shortness of breath, mental status changes, diarrhea, asthenia, chest

tightness, malaise, chill, rale, fever, pleuritic pain, apyrexial, guaiac positive, swelling, catatonia, unresponsiveness, yellow sputum. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with chronic kidney failure.---

symptom: The following are the symptoms of carcinoma: mass of body structure, pain, lesion, tumor cell invasion, thicken, decreased body weight, hoarseness, general discomfort, metastatic lesion,

non-productive cough, constipation, unhappy, paresthesia, gravida 0, diarrhea, sore to touch, heartburn, nausea, lung nodule disease: What are the symptoms of carcinoma?---

symptom: I am having the following symptoms: mass of body structure, pain, lesion, tumor cell invasion, thicken, decreased body weight, hoarseness, general discomfort, metastatic lesion,

non-productive cough, constipation, unhappy, paresthesia, gravida 0, diarrhea, sore to touch, heartburn, nausea, lung nodule. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with carcinoma.---

symptom: The following are the symptoms of hepatitis C: ascites, distended abdomen, feeling suicidal, cough, ache, macerated skin, heavy feeling, hallucinations auditory, chill, asterixis, patient non

compliance disease: What are the symptoms of hepatitis C?---

symptom: I am having the following symptoms: ascites, distended abdomen, feeling suicidal, cough, ache, macerated skin, heavy feeling, hallucinations auditory, chill, asterixis, patient non compliance.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis C.---

symptom: The following are the symptoms of peripheral vascular disease: shortness of breath, rest pain, angina pectoris, unresponsiveness, hyperkalemia, sinus rhythm, labored breathing, dyspnea,

sore to touch, anorexia, sleepy disease: What are the symptoms of peripheral vascular disease?---

symptom: I am having the following symptoms: shortness of breath, rest pain, angina pectoris, unresponsiveness, hyperkalemia, sinus rhythm, labored breathing, dyspnea, sore to touch, anorexia,

sleepy. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with peripheral vascular disease.---

symptom: The following are the symptoms of psychotic disorder: suicidal, hallucinations auditory, feeling suicidal, hallucinations visual, motor retardation, blackout, verbal auditory hallucinations, feeling

hopeless, irritable mood, agitation, tremor, catatonia, weepiness, homelessness, sleeplessness, withdraw, energy increased, intoxication, worry, behavior hyperactive, patient non compliance, mood

depressed, terrify, nightmare, consciousness clear disease: What are the symptoms of psychotic disorder?---

symptom: I am having the following symptoms: suicidal, hallucinations auditory, feeling suicidal, hallucinations visual, motor retardation, blackout, verbal auditory hallucinations, feeling hopeless,

irritable mood, agitation, tremor, catatonia, weepiness, homelessness, sleeplessness, withdraw, energy increased, intoxication, worry, behavior hyperactive, patient non compliance, mood depressed,

terrify, nightmare, consciousness clear. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with psychotic disorder.---

symptom: The following are the symptoms of hyperlipidemia: pain chest, angina pectoris, palpitation, presence of q wave, photopsia, sweating increased, chest discomfort, shortness of breath, giddy

mood, hypokinesia, hemiplegia, dizziness disease: What are the symptoms of hyperlipidemia?---

symptom: I am having the following symptoms: pain chest, angina pectoris, palpitation, presence of q wave, photopsia, sweating increased, chest discomfort, shortness of breath, giddy mood,

hypokinesia, hemiplegia, dizziness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hyperlipidemia.---

symptom: The following are the symptoms of bipolar disorder: feeling suicidal, energy increased, suicidal, irritable mood, agitation, has religious belief, disturbed family, hallucinations auditory, verbal

auditory hallucinations, weepiness, behavior hyperactive, catatonia, feeling hopeless, worry, sleeplessness, hypersomnia, difficulty, hallucinations visual, hyperhidrosis disorder, mydriasis,

extrapyramidal sign, loose associations, intoxication, motor retardation, homelessness, blackout, tremor, exhaustion disease: What are the symptoms of bipolar disorder?---

symptom: I am having the following symptoms: feeling suicidal, energy increased, suicidal, irritable mood, agitation, has religious belief, disturbed family, hallucinations auditory, verbal auditory

hallucinations, weepiness, behavior hyperactive, catatonia, feeling hopeless, worry, sleeplessness, hypersomnia, difficulty, hallucinations visual, hyperhidrosis disorder, mydriasis, extrapyramidal sign,

loose associations, intoxication, motor retardation, homelessness, blackout, tremor, exhaustion. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

bipolar disorder.---

symptom: The following are the symptoms of obesity: pain, catatonia, snore, pain chest, r wave feature, has religious belief, shortness of breath, tired, overweight, systolic murmur, mood depressed,

ecchymosis disease: What are the symptoms of obesity?---

symptom: I am having the following symptoms: pain, catatonia, snore, pain chest, r wave feature, has religious belief, shortness of breath, tired, overweight, systolic murmur, mood depressed,

ecchymosis. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with obesity.---

symptom: The following are the symptoms of ischemia: sleepy, pain chest, angina pectoris, pressure chest, chest discomfort, shortness of breath, dyspnea, sinus rhythm, bradycardia, sweating

increased, rale, asymptomatic, anorexia disease: What are the symptoms of ischemia?---

symptom: I am having the following symptoms: sleepy, pain chest, angina pectoris, pressure chest, chest discomfort, shortness of breath, dyspnea, sinus rhythm, bradycardia, sweating increased, rale,

asymptomatic, anorexia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with ischemia.---

symptom: The following are the symptoms of cirrhosis: ascites, fall, splenomegaly, pruritus, pain abdominal, tumor cell invasion, distended abdomen, lesion, hemodynamically stable, guaiac positive,

sore to touch, bleeding of vagina disease: What are the symptoms of cirrhosis?---

symptom: I am having the following symptoms: ascites, fall, splenomegaly, pruritus, pain abdominal, tumor cell invasion, distended abdomen, lesion, hemodynamically stable, guaiac positive, sore to

touch, bleeding of vagina. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with cirrhosis.---

symptom: The following are the symptoms of exanthema: fever, pruritus, macule, lesion, redness, headache, apyrexial, arthralgia, swelling, erythema, photophobia, chill, scratch marks, pain, painful

swallowing disease: What are the symptoms of exanthema?---

symptom: I am having the following symptoms: fever, pruritus, macule, lesion, redness, headache, apyrexial, arthralgia, swelling, erythema, photophobia, chill, scratch marks, pain, painful swallowing.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with exanthema.---

symptom: The following are the symptoms of benign prostatic hypertrophy: mental status changes, cachexia, blackout, orthostasis, orthopnea, night sweat, distress respiratory, anorexia, dysarthria

disease: What are the symptoms of benign prostatic hypertrophy?---

symptom: I am having the following symptoms: mental status changes, cachexia, blackout, orthostasis, orthopnea, night sweat, distress respiratory, anorexia, dysarthria. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with benign prostatic hypertrophy.---

symptom: The following are the symptoms of kidney failure acute: hyperkalemia, hypotension, hypocalcemia result, oliguria, hemodynamically stable, asthenia, hypothermia, natural, diarrhea,

haemorrhage, unresponsiveness disease: What are the symptoms of kidney failure acute?---

symptom: I am having the following symptoms: hyperkalemia, hypotension, hypocalcemia result, oliguria, hemodynamically stable, asthenia, hypothermia, natural, diarrhea, haemorrhage,

unresponsiveness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with kidney failure acute.---

symptom: The following are the symptoms of mitral valve insufficiency: shortness of breath, dyspnea on exertion, asymptomatic, hypokinesia, dyspnea, syncope, thicken, left atrial hypertrophy,

palpitation, fatigue, vomiting, pain, cardiomegaly, chest discomfort disease: What are the symptoms of mitral valve insufficiency?---

symptom: I am having the following symptoms: shortness of breath, dyspnea on exertion, asymptomatic, hypokinesia, dyspnea, syncope, thicken, left atrial hypertrophy, palpitation, fatigue, vomiting,

pain, cardiomegaly, chest discomfort. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with mitral valve insufficiency.---

symptom: The following are the symptoms of arthritis: pain, hemodynamically stable, sleeplessness, asthenia, syncope, swelling, atypia, general unsteadiness, shortness of breath, distended abdomen

disease: What are the symptoms of arthritis?---

symptom: I am having the following symptoms: pain, hemodynamically stable, sleeplessness, asthenia, syncope, swelling, atypia, general unsteadiness, shortness of breath, distended abdomen. What

could be the disease ? disease: The symptoms listed indicates that the patient is dealing with arthritis.---

symptom: The following are the symptoms of bronchitis: cough, wheezing, shortness of breath, chest tightness, fever, throat sore, productive cough, hepatosplenomegaly, night sweat, haemoptysis,

labored breathing, snuffle, hacking cough, dyspnea, chill, stridor, decreased body weight    disease: What are the symptoms of bronchitis?---

symptom: I am having the following symptoms: cough, wheezing, shortness of breath, chest tightness, fever, throat sore, productive cough, hepatosplenomegaly, night sweat, haemoptysis, labored

breathing, snuffle, hacking cough, dyspnea, chill, stridor, decreased body weight. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with bronchitis.---

symptom: The following are the symptoms of hemiparesis: dysarthria, paresis, asthenia, aphagia, seizure, speech slurred, focal seizures, hemiplegia, abnormal sensation, unresponsiveness, stupor,

sleepy, fremitus, Stahl's line, stinging sensation, paralyse, clonus, facial paresis    disease: What are the symptoms of hemiparesis?---

symptom: I am having the following symptoms: dysarthria, paresis, asthenia, aphagia, seizure, speech slurred, focal seizures, hemiplegia, abnormal sensation, unresponsiveness, stupor, sleepy,

fremitus, Stahl's line, stinging sensation, paralyse, clonus, facial paresis. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hemiparesis.---

symptom: The following are the symptoms of osteoporosis: prostatism, fall, hirsutism, snuffle, distended abdomen, vertigo, numbness of hand, bradykinesia, pain, syncope, out of breath, apyrexial,

urge incontinence, lightheadedness    disease: What are the symptoms of osteoporosis?---

symptom: I am having the following symptoms: prostatism, fall, hirsutism, snuffle, distended abdomen, vertigo, numbness of hand, bradykinesia, pain, syncope, out of breath, apyrexial, urge

incontinence, lightheadedness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with osteoporosis.---

symptom: The following are the symptoms of transient ischemic attack: speech slurred, dysarthria, facial paresis, asthenia, neck stiffness, vertigo, numbness, lightheadedness, extrapyramidal sign,

Stahl's line, vision blurred, headache, room spinning, syncope, difficulty, rambling speech, clumsiness    disease: What are the symptoms of transient ischemic attack?---

symptom: I am having the following symptoms: speech slurred, dysarthria, facial paresis, asthenia, neck stiffness, vertigo, numbness, lightheadedness, extrapyramidal sign, Stahl's line, vision blurred,

headache, room spinning, syncope, difficulty, rambling speech, clumsiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with transient ischemic

attack.---

symptom: The following are the symptoms of adenocarcinoma: mass of body structure, lesion, decreased body weight, constipation, fremitus, decreased stool caliber, satiety early, hematochezia,

egophony, pain, scar tissue, pain abdominal    disease: What are the symptoms of adenocarcinoma?---

symptom: I am having the following symptoms: mass of body structure, lesion, decreased body weight, constipation, fremitus, decreased stool caliber, satiety early, hematochezia, egophony, pain, scar

tissue, pain abdominal. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with adenocarcinoma.---

symptom: The following are the symptoms of paranoia: hallucinations auditory, hallucinations visual, agitation, irritable mood, verbal auditory hallucinations, feeling suicidal, suicidal, terrify, neologism,

homelessness, energy increased, mood depressed, decompensation, scar tissue, blackout, loose associations    disease: What are the symptoms of paranoia?---

symptom: I am having the following symptoms: hallucinations auditory, hallucinations visual, agitation, irritable mood, verbal auditory hallucinations, feeling suicidal, suicidal, terrify, neologism,

homelessness, energy increased, mood depressed, decompensation, scar tissue, blackout, loose associations. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with paranoia.---

symptom: The following are the symptoms of pancreatitis: vomiting, pain abdominal, nausea, pain, diarrhea, stool color yellow, rigor - temperature-associated observation, apyrexial, sore to touch

disease: What are the symptoms of pancreatitis?---

symptom: I am having the following symptoms: vomiting, pain abdominal, nausea, pain, diarrhea, stool color yellow, rigor - temperature-associated observation, apyrexial, sore to touch. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with pancreatitis.---

symptom: The following are the symptoms of incontinence: paraparesis, seizure, asthenia, urge incontinence, unconscious state, aura, moody, fear of falling, tremor, spasm, unhappy, syncope, fall,

stiffness, unresponsiveness disease: What are the symptoms of incontinence?---

symptom: I am having the following symptoms: paraparesis, seizure, asthenia, urge incontinence, unconscious state, aura, moody, fear of falling, tremor, spasm, unhappy, syncope, fall, stiffness,

unresponsiveness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with incontinence.---

symptom: The following are the symptoms of paroxysmal dyspnea: orthopnea, shortness of breath, dyspnea on exertion, jugular venous distention, rale, pain chest, palpitation, sweating increased,

weight gain, cough, dyspnea disease: What are the symptoms of paroxysmal dyspnea?---

symptom: I am having the following symptoms: orthopnea, shortness of breath, dyspnea on exertion, jugular venous distention, rale, pain chest, palpitation, sweating increased, weight gain, cough,

dyspnea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with paroxysmal dyspnea.---

symptom: The following are the symptoms of hernia: pain abdominal, pain, hyperventilation, excruciating pain, gag, nausea, posturing, hemiplegia, sore to touch, haemorrhage, apyrexial, food

intolerance, pulse absent, asthenia, mass of body structure, thicken disease: What are the symptoms of hernia?---

symptom: I am having the following symptoms: pain abdominal, pain, hyperventilation, excruciating pain, gag, nausea, posturing, hemiplegia, sore to touch, haemorrhage, apyrexial, food intolerance,

pulse absent, asthenia, mass of body structure, thicken. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hernia.---

symptom: The following are the symptoms of carcinoma prostate: hematuria, dysesthesia, asthenia, polymyalgia, passed stones, pleuritic pain, guaiac positive, rale, breath sounds decreased, urge

incontinence, dysuria, diarrhea, vertigo, qt interval prolonged, ataxia, paresis, hemianopsia homonymous, tumor cell invasion, hemodynamically stable, mass of body structure, rhonchus, orthostasis,

decreased body weight disease: What are the symptoms of carcinoma prostate?---

symptom: I am having the following symptoms: hematuria, dysesthesia, asthenia, polymyalgia, passed stones, pleuritic pain, guaiac positive, rale, breath sounds decreased, urge incontinence, dysuria,

diarrhea, vertigo, qt interval prolonged, ataxia, paresis, hemianopsia homonymous, tumor cell invasion, hemodynamically stable, mass of body structure, rhonchus, orthostasis, decreased body weight.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with carcinoma prostate.---

symptom: The following are the symptoms of edema pulmonary: urgency of micturition, shortness of breath, rale, tachypnea, orthopnea, Heberden's node, jugular venous distention, dyspnea, sweating

increased, patient non compliance, chest discomfort, hyperkalemia, sinus rhythm, pain chest, hypotension, wheezing disease: What are the symptoms of edema pulmonary?---

symptom: I am having the following symptoms: urgency of micturition, shortness of breath, rale, tachypnea, orthopnea, Heberden's node, jugular venous distention, dyspnea, sweating increased,

patient non compliance, chest discomfort, hyperkalemia, sinus rhythm, pain chest, hypotension, wheezing. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with edema pulmonary.---

symptom: The following are the symptoms of lymphatic diseases: pain, mass of body structure, night sweat, splenomegaly, lesion, chill, decreased body weight, swelling, fever, hyperacusis, fremitus,

non-productive cough, egophony, redness, hepatomegaly, fatigue disease: What are the symptoms of lymphatic diseases?---

symptom: I am having the following symptoms: pain, mass of body structure, night sweat, splenomegaly, lesion, chill, decreased body weight, swelling, fever, hyperacusis, fremitus, non-productive

cough, egophony, redness, hepatomegaly, fatigue. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with lymphatic diseases.---

symptom: The following are the symptoms of stenosis aortic valve: dyspnea on exertion, syncope, chest discomfort, systolic murmur, sciatica, angina pectoris, pain chest, frothy sputum, bradycardia,

shortness of breath, pain disease: What are the symptoms of stenosis aortic valve?---

symptom: I am having the following symptoms: dyspnea on exertion, syncope, chest discomfort, systolic murmur, sciatica, angina pectoris, pain chest, frothy sputum, bradycardia, shortness of breath,

pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with stenosis aortic valve.---

symptom: The following are the symptoms of carcinoma breast: mass in breast, mass of body structure, paresthesia, retropulsion, erythema, difficulty, lesion, estrogen use, burning sensation, dyspnea,

swelling, formication disease: What are the symptoms of carcinoma breast?---

symptom: I am having the following symptoms: mass in breast, mass of body structure, paresthesia, retropulsion, erythema, difficulty, lesion, estrogen use, burning sensation, dyspnea, swelling,

formication. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with carcinoma breast.---

symptom: The following are the symptoms of schizophrenia: hallucinations auditory, hypersomnolence, irritable mood, verbal auditory hallucinations, patient non compliance, agitation, suicidal, worry,

hallucinations visual, underweight, homelessness disease: What are the symptoms of schizophrenia?---

symptom: I am having the following symptoms: hallucinations auditory, hypersomnolence, irritable mood, verbal auditory hallucinations, patient non compliance, agitation, suicidal, worry, hallucinations

visual, underweight, homelessness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with schizophrenia.---

symptom: The following are the symptoms of diverticulitis: pain abdominal, abscess bacterial, dullness, red blotches, diarrhea, sore to touch, dysuria, pain, vomiting, sinus rhythm, colic abdominal,

apyrexial, abdominal tenderness, fever, unsteady gait, thicken, urgency of micturition, anorexia, monoclonal, constipation disease: What are the symptoms of diverticulitis?---

symptom: I am having the following symptoms: pain abdominal, abscess bacterial, dullness, red blotches, diarrhea, sore to touch, dysuria, pain, vomiting, sinus rhythm, colic abdominal, apyrexial,

abdominal tenderness, fever, unsteady gait, thicken, urgency of micturition, anorexia, monoclonal, constipation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with diverticulitis.---

symptom: The following are the symptoms of overload fluid: rale, jugular venous distention, hyperkalemia, orthopnea, shortness of breath, sleepy, weight gain, hypokalemia, hypotension, swelling,

distended abdomen disease: What are the symptoms of overload fluid?---

symptom: I am having the following symptoms: rale, jugular venous distention, hyperkalemia, orthopnea, shortness of breath, sleepy, weight gain, hypokalemia, hypotension, swelling, distended

abdomen. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with overload fluid.---

symptom: The following are the symptoms of ulcer peptic: pain abdominal, paraparesis, nausea, vomiting, polymyalgia, out of breath, pain chest, hemiplegia, gurgle, hunger, apyrexial, nervousness

disease: What are the symptoms of ulcer peptic?---

symptom: I am having the following symptoms: pain abdominal, paraparesis, nausea, vomiting, polymyalgia, out of breath, pain chest, hemiplegia, gurgle, hunger, apyrexial, nervousness. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with ulcer peptic.---

symptom: The following are the symptoms of osteomyelitis: pain, redness, prostate tender, fever, difficulty passing urine, sore to touch, swelling, apyrexial, erythema, abscess bacterial, pain foot,

urinary hesitation disease: What are the symptoms of osteomyelitis?---

symptom: I am having the following symptoms: pain, redness, prostate tender, fever, difficulty passing urine, sore to touch, swelling, apyrexial, erythema, abscess bacterial, pain foot, urinary hesitation.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with osteomyelitis.---

symptom: The following are the symptoms of gastritis: heme positive, pain abdominal, vomiting, disequilibrium, nausea, intoxication, haemorrhage, guaiac positive, pain, decreased body weight, sore to

touch, dizziness disease: What are the symptoms of gastritis?---

symptom: I am having the following symptoms: heme positive, pain abdominal, vomiting, disequilibrium, nausea, intoxication, haemorrhage, guaiac positive, pain, decreased body weight, sore to touch,

dizziness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with gastritis.---

symptom: The following are the symptoms of bacteremia: fever, chill, flushing, unresponsiveness, indifferent mood, urinoma, vomiting, distended abdomen, hypoalbuminemia, pustule, prostatism,

diarrhea, abdominal tenderness, pleuritic pain, decreased translucency, pallor disease: What are the symptoms of bacteremia?---

symptom: I am having the following symptoms: fever, chill, flushing, unresponsiveness, indifferent mood, urinoma, vomiting, distended abdomen, hypoalbuminemia, pustule, prostatism, diarrhea,

abdominal tenderness, pleuritic pain, decreased translucency, pallor. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with bacteremia.---

symptom: The following are the symptoms of failure kidney: orthopnea, oliguria, slowing of urinary stream, extreme exhaustion, unresponsiveness, hypotension, enuresis, shortness of breath,

haemorrhage, prostatism, no status change, bedridden, fatigue disease: What are the symptoms of failure kidney?---

symptom: I am having the following symptoms: orthopnea, oliguria, slowing of urinary stream, extreme exhaustion, unresponsiveness, hypotension, enuresis, shortness of breath, haemorrhage,

prostatism, no status change, bedridden, fatigue. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with failure kidney.---

symptom: The following are the symptoms of sickle cell anemia: breakthrough pain, pain back, pain, shortness of breath, snuffle, pain chest, pain abdominal, hepatosplenomegaly, green sputum,

apyrexial, headache disease: What are the symptoms of sickle cell anemia?---

symptom: I am having the following symptoms: breakthrough pain, pain back, pain, shortness of breath, snuffle, pain chest, pain abdominal, hepatosplenomegaly, green sputum, apyrexial, headache.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with sickle cell anemia.---

symptom: The following are the symptoms of failure heart: orthopnea, fatigue, dyspnea on exertion, dyspnea, shortness of breath, pansystolic murmur, jugular venous distention, systolic ejection

murmur, hypotension, angina pectoris, hypokinesia disease: What are the symptoms of failure heart?---

symptom: I am having the following symptoms: orthopnea, fatigue, dyspnea on exertion, dyspnea, shortness of breath, pansystolic murmur, jugular venous distention, systolic ejection murmur,

hypotension, angina pectoris, hypokinesia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with failure heart.---

symptom: The following are the symptoms of upper respiratory infection: cough, throat sore, wheezing, shortness of breath, labored breathing, fever, stuffy nose, non-productive cough, snuffle,

indifferent mood, egophony, barking cough, polymyalgia, pleuritic pain, night sweat, dyspnea, productive cough, decreased translucency, rhonchus, rapid shallow breathing, apyrexial, noisy respiration,

nasal discharge present, emphysematous change, frail, cystic lesion, symptom aggravating factors, hemodynamically stable disease: What are the symptoms of upper respiratory infection?---

symptom: I am having the following symptoms: cough, throat sore, wheezing, shortness of breath, labored breathing, fever, stuffy nose, non-productive cough, snuffle, indifferent mood, egophony,

barking cough, polymyalgia, pleuritic pain, night sweat, dyspnea, productive cough, decreased translucency, rhonchus, rapid shallow breathing, apyrexial, noisy respiration, nasal discharge present,

emphysematous change, frail, cystic lesion, symptom aggravating factors, hemodynamically stable. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

upper respiratory infection.---

symptom: The following are the symptoms of hepatitis: ascites, spontaneous rupture of membranes, tachypnea, pain abdominal, pruritus, anorexia, transaminitis, projectile vomiting, chill, distress

respiratory, fever, vomiting disease: What are the symptoms of hepatitis?---

symptom: I am having the following symptoms: ascites, spontaneous rupture of membranes, tachypnea, pain abdominal, pruritus, anorexia, transaminitis, projectile vomiting, chill, distress respiratory,

fever, vomiting. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis.---

symptom: The following are the symptoms of hypertension pulmonary: shortness of breath, Stahl's line, heavy legs, breath sounds decreased, neck stiffness, dyspnea on exertion, cyanosis,

hypotension, left atrial hypertrophy disease: What are the symptoms of hypertension pulmonary?---

symptom: I am having the following symptoms: shortness of breath, Stahl's line, heavy legs, breath sounds decreased, neck stiffness, dyspnea on exertion, cyanosis, hypotension, left atrial

hypertrophy. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hypertension pulmonary.---

symptom: The following are the symptoms of deglutition disorder: paresthesia, titubation, dysarthria, painful swallowing, hoarseness, stridor, spasm, asthenia, dysdiadochokinesia, ataxia, achalasia,

decreased body weight, stiffness, lesion, side pain disease: What are the symptoms of deglutition disorder?---

symptom: I am having the following symptoms: paresthesia, titubation, dysarthria, painful swallowing, hoarseness, stridor, spasm, asthenia, dysdiadochokinesia, ataxia, achalasia, decreased body

weight, stiffness, lesion, side pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with deglutition disorder.---

symptom: The following are the symptoms of gout: hot flush, pain, redness, swelling, erythema, emphysematous change, sore to touch, hypokinesia, ascites, patient non compliance disease: What are

the symptoms of gout?---

symptom: I am having the following symptoms: hot flush, pain, redness, swelling, erythema, emphysematous change, sore to touch, hypokinesia, ascites, patient non compliance. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with gout.---

symptom: The following are the symptoms of thrombocytopaenia: ecchymosis, monocytosis, posterior rhinorrhea, haemorrhage, tachypnea, fever, pruritus, hypotension, fatigue disease: What are the

symptoms of thrombocytopaenia?---

symptom: I am having the following symptoms: ecchymosis, monocytosis, posterior rhinorrhea, haemorrhage, tachypnea, fever, pruritus, hypotension, fatigue. What could be the disease ? disease:

The symptoms listed indicates that the patient is dealing with thrombocytopaenia.---

symptom: The following are the symptoms of hypoglycemia: unresponsiveness, hypothermia, natural, incoherent, qt interval prolonged, claudication, unconscious state, clammy skin, polyuria, distress

respiratory, hypotension disease: What are the symptoms of hypoglycemia?---

symptom: I am having the following symptoms: unresponsiveness, hypothermia, natural, incoherent, qt interval prolonged, claudication, unconscious state, clammy skin, polyuria, distress respiratory,

hypotension. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hypoglycemia.---

symptom: The following are the symptoms of pneumonia aspiration: mediastinal shift, fever, clonus, mental status changes, decreased translucency, unresponsiveness, extreme exhaustion, stupor,

seizure, transaminitis, hemiplegia, cough, gurgle, pain, diarrhea, pain abdominal disease: What are the symptoms of pneumonia aspiration?---

symptom: I am having the following symptoms: mediastinal shift, fever, clonus, mental status changes, decreased translucency, unresponsiveness, extreme exhaustion, stupor, seizure, transaminitis,

hemiplegia, cough, gurgle, pain, diarrhea, pain abdominal. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with pneumonia aspiration.---

symptom: The following are the symptoms of colitis: fever, thicken, green sputum, vomiting, nausea and vomiting, awakening early, pain, nausea, chill, tenesmus, urge incontinence, pain abdominal,

hemodynamically stable disease: What are the symptoms of colitis?---

symptom: I am having the following symptoms: fever, thicken, green sputum, vomiting, nausea and vomiting, awakening early, pain, nausea, chill, tenesmus, urge incontinence, pain abdominal,

hemodynamically stable. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with colitis.---

symptom: The following are the symptoms of diverticulosis: fecaluria, constipation, abscess bacterial, heme positive, lightheadedness, diarrhea, haemorrhage, pain, projectile vomiting, pneumatouria,

cystic lesion, anorexia, nausea, feeling suicidal, feeling hopeless disease: What are the symptoms of diverticulosis?---

symptom: I am having the following symptoms: fecaluria, constipation, abscess bacterial, heme positive, lightheadedness, diarrhea, haemorrhage, pain, projectile vomiting, pneumatouria, cystic lesion,

anorexia, nausea, feeling suicidal, feeling hopeless. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with diverticulosis.---

symptom: The following are the symptoms of nan: hallucinations auditory, sleeplessness, suicidal, motor retardation, weepiness, unable to concentrate, todd paralysis, worry, fatigue, tremor, alcoholic

withdrawal symptoms, agitation, unresponsiveness, blackout, withdraw, difficulty, irritable mood, sensory discomfort, drowsiness, formication, unconscious state, fever, cough disease: What are the

symptoms of nan?---

symptom: I am having the following symptoms: hallucinations auditory, sleeplessness, suicidal, motor retardation, weepiness, unable to concentrate, todd paralysis, worry, fatigue, tremor, alcoholic

withdrawal symptoms, agitation, unresponsiveness, blackout, withdraw, difficulty, irritable mood, sensory discomfort, drowsiness, formication, unconscious state, fever, cough. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with nan.---

symptom: The following are the symptoms of suicide attempt: disease: What are the symptoms of suicide attempt?---

symptom: I am having the following symptoms: . What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with suicide attempt.---

symptom: The following are the symptoms of Pneumocystis carinii pneumonia: yellow sputum, cachexia, chill, decreased body weight, productive cough, myalgia, diarrhea, neck stiffness, hacking cough, dyspareunia, hypokalemia, dyspnea on exertion, poor dentition, transaminitis, non-productive cough, headache, floppy, spontaneous rupture of membranes disease: What are the symptoms of Pneumocystis carinii pneumonia?---

symptom: I am having the following symptoms: yellow sputum, cachexia, chill, decreased body weight, productive cough, myalgia, diarrhea, neck stiffness, hacking cough, dyspareunia, hypokalemia, dyspnea on exertion, poor dentition, transaminitis, non-productive cough, headache, floppy, spontaneous rupture of membranes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Pneumocystis carinii pneumonia.---

symptom: The following are the symptoms of hepatitis B: inappropriate affect, tachypnea, yellow sputum, projectile vomiting, poor feeding, pain abdominal, abdominal tenderness, wheelchair bound, moan disease: What are the symptoms of hepatitis B?---

symptom: I am having the following symptoms: inappropriate affect, tachypnea, yellow sputum, projectile vomiting, poor feeding, pain abdominal, abdominal tenderness, wheelchair bound, moan. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis B.---

symptom: The following are the symptoms of parkinson disease: achalasia, fall, stiffness, withdraw, agitation, hemiplegia, difficulty, unresponsiveness, syncope, facial paresis, orthostasis, worry, sleepy, hematuria, tremor, night sweat, mass of body structure disease: What are the symptoms of parkinson disease?---

symptom: I am having the following symptoms: achalasia, fall, stiffness, withdraw, agitation, hemiplegia, difficulty, unresponsiveness, syncope, facial paresis, orthostasis, worry, sleepy, hematuria, tremor, night sweat, mass of body structure. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with parkinson disease.---

symptom: The following are the symptoms of lymphoma: lesion, fever, welt, transaminitis, decreased body weight, ataxia, tinnitus, hydropneumothorax, superimposition, haemoptysis, tired, polydypsia, difficulty passing urine disease: What are the symptoms of lymphoma?---

symptom: I am having the following symptoms: lesion, fever, welt, transaminitis, decreased body weight, ataxia, tinnitus, hydropneumothorax, superimposition, haemoptysis, tired, polydypsia, difficulty passing urine. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with lymphoma.---

symptom: The following are the symptoms of hyperglycemia: sore to touch, pruritus, feeling strange, pustule, cushingoid habitus, decreased body weight, mood depressed, estrogen use, wheezing, ascites, seizure disease: What are the symptoms of hyperglycemia?---

symptom: I am having the following symptoms: sore to touch, pruritus, feeling strange, pustule, cushingoid habitus, decreased body weight, mood depressed, estrogen use, wheezing, ascites, seizure. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hyperglycemia.---

symptom: The following are the symptoms of encephalopathy: uncoordination, asterixis, haemorrhage, sleepy, absences finding, posturing, aura, tonic seizures, debilitation, consciousness clear, unresponsiveness, thicken, hypokinesia disease: What are the symptoms of encephalopathy?---

symptom: I am having the following symptoms: uncoordination, asterixis, haemorrhage, sleepy, absences finding, posturing, aura, tonic seizures, debilitation, consciousness clear, unresponsiveness, thicken, hypokinesia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with encephalopathy.---

symptom: The following are the symptoms of tricuspid valve insufficiency: shortness of breath, pain, vomiting, nausea, bradycardia, pain abdominal, fever, cicatrisation, mediastinal shift, impaired

cognition disease: What are the symptoms of tricuspid valve insufficiency?---

symptom: I am having the following symptoms: shortness of breath, pain, vomiting, nausea, bradycardia, pain abdominal, fever, cicatrisation, mediastinal shift, impaired cognition. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with tricuspid valve insufficiency.---

symptom: The following are the symptoms of Alzheimer's disease: drool, agitation, nightmare, rhonchus, consciousness clear, pin-point pupils, bedridden, frail, tremor resting, hyperkalemia, facial

paresis, groggy, muscle twitch, wheelchair bound, tremor, cough, fever disease: What are the symptoms of Alzheimer's disease?---

symptom: I am having the following symptoms: drool, agitation, nightmare, rhonchus, consciousness clear, pin-point pupils, bedridden, frail, tremor resting, hyperkalemia, facial paresis, groggy, muscle

twitch, wheelchair bound, tremor, cough, fever. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Alzheimer's disease.---

symptom: The following are the symptoms of oral candidiasis: diarrhea, throat sore, decreased body weight, chill, headache, abdominal tenderness, patient non compliance, photophobia, night sweat,

painful swallowing, poor dentition, transaminitis, non-productive cough, adverse effect, abdominal bloating disease: What are the symptoms of oral candidiasis?---

symptom: I am having the following symptoms: diarrhea, throat sore, decreased body weight, chill, headache, abdominal tenderness, patient non compliance, photophobia, night sweat, painful

swallowing, poor dentition, transaminitis, non-productive cough, adverse effect, abdominal bloating. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

oral candidiasis.---

symptom: The following are the symptoms of neuropathy: asthenia, numbness, nausea and vomiting, awakening early, hydropneumothorax, superimposition, fatigability, tenesmus, pain, slowing of

urinary stream disease: What are the symptoms of neuropathy?---

symptom: I am having the following symptoms: asthenia, numbness, nausea and vomiting, awakening early, hydropneumothorax, superimposition, fatigability, tenesmus, pain, slowing of urinary stream.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with neuropathy.---

symptom: The following are the symptoms of kidney disease: shortness of breath, hyperkalemia, pain chest, fever, gravida 0, bleeding of vagina disease: What are the symptoms of kidney

disease?---

symptom: I am having the following symptoms: shortness of breath, hyperkalemia, pain chest, fever, gravida 0, bleeding of vagina. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with kidney disease.---

symptom: The following are the symptoms of fibroid tumor: para 2, haemorrhage, abortion, intermenstrual heavy bleeding, hypotonic, previous pregnancies 2, shortness of breath, fever, heartburn,

primigravida, abnormally hard consistency, proteinemia disease: What are the symptoms of fibroid tumor?---

symptom: I am having the following symptoms: para 2, haemorrhage, abortion, intermenstrual heavy bleeding, hypotonic, previous pregnancies 2, shortness of breath, fever, heartburn, primigravida,

abnormally hard consistency, proteinemia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with fibroid tumor.---

symptom: The following are the symptoms of glaucoma: fall, distended abdomen, unsteady gait, paresthesia, hyponatremia, agitation, unconscious state, burning sensation, lesion, mass of body

structure disease: What are the symptoms of glaucoma?---

symptom: I am having the following symptoms: fall, distended abdomen, unsteady gait, paresthesia, hyponatremia, agitation, unconscious state, burning sensation, lesion, mass of body structure.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with glaucoma.---

symptom: The following are the symptoms of neoplasm metastasis: thicken, tumor cell invasion, metastatic lesion, pain neck, lung nodule, pain, pain abdominal, food intolerance, mass of body

structure, atypia disease: What are the symptoms of neoplasm metastasis?---

symptom: I am having the following symptoms: thicken, tumor cell invasion, metastatic lesion, pain neck, lung nodule, pain, pain abdominal, food intolerance, mass of body structure, atypia. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with neoplasm metastasis.---

symptom: The following are the symptoms of carcinoma colon: lesion, prostatism, constipation, general discomfort, diarrhea, pain abdominal, urinary hesitation, dizzy spells, shooting pain, bradycardia,

vomiting, systolic ejection murmur, nausea, hyperemesis, polydypsia disease: What are the symptoms of carcinoma colon?---

symptom: I am having the following symptoms: lesion, prostatism, constipation, general discomfort, diarrhea, pain abdominal, urinary hesitation, dizzy spells, shooting pain, bradycardia, vomiting,

systolic ejection murmur, nausea, hyperemesis, polydypsia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with carcinoma colon.---

symptom: The following are the symptoms of ketoacidosis diabetic: polyuria, vomiting, nausea, pain abdominal, milky, feeling strange, gurgle, nervousness, abdominal tenderness, regurgitates after

swallowing, vision blurred, urinary hesitation, diarrhea, seizure, aura disease: What are the symptoms of ketoacidosis diabetic?---

symptom: I am having the following symptoms: polyuria, vomiting, nausea, pain abdominal, milky, feeling strange, gurgle, nervousness, abdominal tenderness, regurgitates after swallowing, vision

blurred, urinary hesitation, diarrhea, seizure, aura. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with ketoacidosis diabetic.---

symptom: The following are the symptoms of tonic-clonic seizures: drowsiness, lip smacking, myoclonus, tremor, phonophobia, rolling of eyes, sleepy, hirsutism, moody, muscle twitch,

unresponsiveness, headache, ambidexterity, absences finding, spasm, decreased body weight, tumor cell invasion disease: What are the symptoms of tonic-clonic seizures?---

symptom: I am having the following symptoms: drowsiness, lip smacking, myoclonus, tremor, phonophobia, rolling of eyes, sleepy, hirsutism, moody, muscle twitch, unresponsiveness, headache,

ambidexterity, absences finding, spasm, decreased body weight, tumor cell invasion. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with tonic-clonic

seizures.---

symptom: The following are the symptoms of malignant neoplasms: pulsus paradoxus, grvida 10, mass of body structure, lesion, heartburn, night sweat, thicken, chill, decreased translucency, pain

abdominal, dullness, food intolerance, distress respiratory, hypotension disease: What are the symptoms of malignant neoplasms?---

symptom: I am having the following symptoms: pulsus paradoxus, grvida 10, mass of body structure, lesion, heartburn, night sweat, thicken, chill, decreased translucency, pain abdominal, dullness,

food intolerance, distress respiratory, hypotension. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with malignant neoplasms.---

symptom: The following are the symptoms of respiratory failure: hemiplegia, snore, unresponsiveness, productive cough, dyspnea, tachypnea, hyperkalemia, hypokinesia, sinus rhythm, general

unsteadiness, bruit, consciousness clear, shortness of breath, lesion, redness disease: What are the symptoms of respiratory failure?---

symptom: I am having the following symptoms: hemiplegia, snore, unresponsiveness, productive cough, dyspnea, tachypnea, hyperkalemia, hypokinesia, sinus rhythm, general unsteadiness, bruit,

consciousness clear, shortness of breath, lesion, redness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with respiratory failure.---

symptom: The following are the symptoms of melanoma: mass of body structure, paraparesis, fever, gravaida 0, pain, pruritus, mass in breast, vomiting, diarrhea disease: What are the symptoms of melanoma?---

symptom: I am having the following symptoms: mass of body structure, paraparesis, fever, gravaida 0, pain, pruritus, mass in breast, vomiting, diarrhea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with melanoma.---

symptom: The following are the symptoms of gastroenteritis: pain abdominal, breath-holding spell, nausea, decreased body weight, sore to touch, scleral icterus, fever, myalgia, hyponatremia, retch, mass of body structure, decreased body weight disease: What are the symptoms of gastroenteritis?---

symptom: I am having the following symptoms: pain abdominal, breath-holding spell, nausea, decreased body weight, sore to touch, scleral icterus, fever, myalgia, hyponatremia, retch, mass of body structure, decreased body weight. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with gastroenteritis.---

symptom: The following are the symptoms of carcinoma of lung: lesion, cough, lung nodule, shortness of breath, haemoptysis, debilitation, gurgle, ache, rale, night sweat, decreased translucency, asthenia, metastatic lesion, agitation, irritable mood disease: What are the symptoms of carcinoma of lung?---

symptom: I am having the following symptoms: lesion, cough, lung nodule, shortness of breath, haemoptysis, debilitation, gurgle, ache, rale, night sweat, decreased translucency, asthenia, metastatic lesion, agitation, irritable mood. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with carcinoma of lung.---

symptom: The following are the symptoms of manic disorder: energy increased, suicidal, hypersomnia, feeling suicidal, blanch, hallucinations auditory, hallucinations visual, elation, verbal auditory hallucinations, feeling hopeless, difficulty, decompensation, verbally abusive behavior, suicidal, feeling suicidal disease: What are the symptoms of manic disorder?---

symptom: I am having the following symptoms: energy increased, suicidal, hypersomnia, feeling suicidal, blanch, hallucinations auditory, hallucinations visual, elation, verbal auditory hallucinations, feeling hopeless, difficulty, decompensation, verbally abusive behavior, suicidal, feeling suicidal. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with manic disorder.---

symptom: The following are the symptoms of personality disorder: nightmare, feeling hopeless, transsexual, hallucinations auditory, irritable mood, sleeplessness, agitation, weepiness, mood depressed, scratch marks, nausea and vomiting, extreme exhaustion, side pain, worry, enuresis, homelessness, nervousness, ascites, pruritus disease: What are the symptoms of personality disorder?---

symptom: I am having the following symptoms: nightmare, feeling hopeless, transsexual, hallucinations auditory, irritable mood, sleeplessness, agitation, weepiness, mood depressed, scratch marks, nausea and vomiting, extreme exhaustion, side pain, worry, enuresis, homelessness, nervousness, ascites, pruritus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with personality disorder.---

symptom: The following are the symptoms of primary carcinoma of the liver cells: mass of body structure, splenomegaly, lesion, paresis, tumor cell invasion, room spinning, haemorrhage, thicken,

indifferent mood, cachexia, hypothermia, natural, pain abdominal, hepatomegaly, hematocrit decreased, stupor, decreased body weight, shortness of breath, cough disease: What are the symptoms of

primary carcinoma of the liver cells?---

symptom: I am having the following symptoms: mass of body structure, splenomegaly, lesion, paresis, tumor cell invasion, room spinning, haemorrhage, thicken, indifferent mood, cachexia,

hypothermia, natural, pain abdominal, hepatomegaly, hematocrit decreased, stupor, decreased body weight, shortness of breath, cough. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with primary carcinoma of the liver cells.---

symptom: The following are the symptoms of emphysema pulmonary: behavior showing increased motor activity, scar tissue, dyspnea on exertion, coordination abnormal, myalgia, hypercapnia,

clammy skin, has religious belief, room spinning, moan, night sweat, cachexia, symptom aggravating factors, dyspnea, rale, flushing, painful swallowing, arthralgia, choke, tenesmus, constipation

disease: What are the symptoms of emphysema pulmonary?---

symptom: I am having the following symptoms: behavior showing increased motor activity, scar tissue, dyspnea on exertion, coordination abnormal, myalgia, hypercapnia, clammy skin, has religious

belief, room spinning, moan, night sweat, cachexia, symptom aggravating factors, dyspnea, rale, flushing, painful swallowing, arthralgia, choke, tenesmus, constipation. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with emphysema pulmonary.---

symptom: The following are the symptoms of hemorrhoids: haemorrhage, bowel sounds decreased, decreased stool caliber, nausea and vomiting, hunger, diarrhea, dizziness, hyponatremia, clonus,

pain, achalasia, burning sensation, guaiac positive, numbness of hand, wheezing, cough disease: What are the symptoms of hemorrhoids?---

symptom: I am having the following symptoms: haemorrhage, bowel sounds decreased, decreased stool caliber, nausea and vomiting, hunger, diarrhea, dizziness, hyponatremia, clonus, pain,

achalasia, burning sensation, guaiac positive, numbness of hand, wheezing, cough. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hemorrhoids.---

symptom: The following are the symptoms of spasm bronchial: shortness of breath, scar tissue, apyrexial, no known drug allergies, pain, productive cough, throat sore, dyspnea, chest tightness,

hypoxemia, tachypnea, sensory discomfort, fever, vomiting, rhonchus, hemiplegia, fremitus disease: What are the symptoms of spasm bronchial?---

symptom: I am having the following symptoms: shortness of breath, scar tissue, apyrexial, no known drug allergies, pain, productive cough, throat sore, dyspnea, chest tightness, hypoxemia,

tachypnea, sensory discomfort, fever, vomiting, rhonchus, hemiplegia, fremitus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with spasm bronchial.---

symptom: The following are the symptoms of aphasia: clonus, egophony, facial paresis, aphagia, muscle twitch, paralyse, low back pain, charleyhorse disease: What are the symptoms of aphasia?---

symptom: I am having the following symptoms: clonus, egophony, facial paresis, aphagia, muscle twitch, paralyse, low back pain, charleyhorse. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with aphasia.---

symptom: The following are the symptoms of obesity morbid: out of breath, sedentary, angina pectoris, cough, unhappy, labored breathing, hypothermia, natural, dyspnea, hematocrit decreased,

wheezing, hypoxemia, renal angle tenderness, feels hot/feverish disease: What are the symptoms of obesity morbid?---

symptom: I am having the following symptoms: out of breath, sedentary, angina pectoris, cough, unhappy, labored breathing, hypothermia, natural, dyspnea, hematocrit decreased, wheezing,

hypoxemia, renal angle tenderness, feels hot/feverish. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with obesity morbid.---

symptom: The following are the symptoms of pyelonephritis: fever, pain, urgency of micturition, hematuria, vomiting, chill, diarrhea, nausea, pain abdominal, myalgia, fever, chill disease: What are the

symptoms of pyelonephritis?---

symptom: I am having the following symptoms: fever, pain, urgency of micturition, hematuria, vomiting, chill, diarrhea, nausea, pain abdominal, myalgia, fever, chill. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with pyelonephritis.---

symptom: The following are the symptoms of endocarditis: pleuritic pain, thicken, myalgia, apyrexial, night sweat, flare, shortness of breath, orthopnea, abscess bacterial, hypotension, cough,

metastatic lesion, breath sounds decreased, decreased body weight, pulsus paradoxus, hypokinesia disease: What are the symptoms of endocarditis?---

symptom: I am having the following symptoms: pleuritic pain, thicken, myalgia, apyrexial, night sweat, flare, shortness of breath, orthopnea, abscess bacterial, hypotension, cough, metastatic lesion,

breath sounds decreased, decreased body weight, pulsus paradoxus, hypokinesia. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with endocarditis.---

symptom: The following are the symptoms of pericardial effusion body substance: pericardial friction rub, dyspnea, shortness of breath, hemodynamically stable, cardiomegaly, hypotension, sputum

purulent, facial paresis, pain, oliguria, blackout, intoxication disease: What are the symptoms of pericardial effusion body substance?---

symptom: I am having the following symptoms: pericardial friction rub, dyspnea, shortness of breath, hemodynamically stable, cardiomegaly, hypotension, sputum purulent, facial paresis, pain, oliguria,

blackout, intoxication. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with pericardial effusion body substance.---

symptom: The following are the symptoms of chronic alcoholic intoxication: tremor, hallucinations auditory, suicidal, hoard, irritable mood, feeling hopeless, feeling suicidal, neologism, seizure,

homelessness, sleeplessness, unconscious state, panic, breath sounds decreased, shortness of breath disease: What are the symptoms of chronic alcoholic intoxication?---

symptom: I am having the following symptoms: tremor, hallucinations auditory, suicidal, hoard, irritable mood, feeling hopeless, feeling suicidal, neologism, seizure, homelessness, sleeplessness,

unconscious state, panic, breath sounds decreased, shortness of breath. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with chronic alcoholic

intoxication.---

symptom: The following are the symptoms of pneumothorax: dyspnea, cardiovascular event, haemoptysis, cough, hypercapnia, soft tissue swelling, prostatism, agitation disease: What are the

symptoms of pneumothorax?---

symptom: I am having the following symptoms: dyspnea, cardiovascular event, haemoptysis, cough, hypercapnia, soft tissue swelling, prostatism, agitation. What could be the disease ? disease: The

symptoms listed indicates that the patient is dealing with pneumothorax.---

symptom: The following are the symptoms of delirium: unsteady gait, withdraw, hyponatremia, verbally abusive behavior, feeling suicidal, unresponsiveness, worry, sleepy, hallucinations auditory,

suicidal, fever, diarrhea disease: What are the symptoms of delirium?---

symptom: I am having the following symptoms: unsteady gait, withdraw, hyponatremia, verbally abusive behavior, feeling suicidal, unresponsiveness, worry, sleepy, hallucinations auditory, suicidal,

fever, diarrhea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with delirium.---

symptom: The following are the symptoms of neutropenia: transaminitis, splenomegaly, night sweat, apyrexial, lesion, snuffle, chill, cough, monoclonal, hypocalcemia result, oliguria, rhd positive,

distress respiratory disease: What are the symptoms of neutropenia?---

symptom: I am having the following symptoms: transaminitis, splenomegaly, night sweat, apyrexial, lesion, snuffle, chill, cough, monoclonal, hypocalcemia result, oliguria, rhd positive, distress

respiratory. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with neutropenia.---

symptom: The following are the symptoms of hyperbilirubinemia: cyanosis, tachypnea, para 1, bradycardia, breech presentation, cushingoid habitus, cough, myalgia disease: What are the symptoms

of hyperbilirubinemia?---

symptom: I am having the following symptoms: cyanosis, tachypnea, para 1, bradycardia, breech presentation, cushingoid habitus, cough, myalgia. What could be the disease ? disease: The

symptoms listed indicates that the patient is dealing with hyperbilirubinemia.---

symptom: The following are the symptoms of influenza: uncoordination, fever, pleuritic pain, snuffle, throat sore, malaise, debilitation, symptom aggravating factors, chill, scleral icterus, nasal flaring,

dysuria, lip smacking, headache, sneeze, snore, green sputum, shortness of breath, distress respiratory, blackout, extreme exhaustion disease: What are the symptoms of influenza?---

symptom: I am having the following symptoms: uncoordination, fever, pleuritic pain, snuffle, throat sore, malaise, debilitation, symptom aggravating factors, chill, scleral icterus, nasal flaring, dysuria, lip

smacking, headache, sneeze, snore, green sputum, shortness of breath, distress respiratory, blackout, extreme exhaustion. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with influenza.---

symptom: The following are the symptoms of dependence: intoxication, tremor, agitation, suicidal, homelessness, prostatism, lethargy, seizure, muscle twitch, stuffy nose, feeling hopeless, heavy legs,

rale disease: What are the symptoms of dependence?---

symptom: I am having the following symptoms: intoxication, tremor, agitation, suicidal, homelessness, prostatism, lethargy, seizure, muscle twitch, stuffy nose, feeling hopeless, heavy legs, rale. What

could be the disease ? disease: The symptoms listed indicates that the patient is dealing with dependence.---

symptom: The following are the symptoms of thrombus: hypokinesia, anorexia, hypertonicity, shortness of breath, hypoalbuminemia, pruritus, sore to touch, hemodynamically stable, facial paresis,

vomiting, stool color yellow disease: What are the symptoms of thrombus?---

symptom: I am having the following symptoms: hypokinesia, anorexia, hypertonicity, shortness of breath, hypoalbuminemia, pruritus, sore to touch, hemodynamically stable, facial paresis, vomiting,

stool color yellow. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with thrombus.---

symptom: The following are the symptoms of cholecystitis: moan, nausea, pain abdominal, Murphy's sign, flatulence, colic abdominal, pain, ascites, diarrhea, qt interval prolonged, cardiovascular event,

groggy, sinus rhythm, gasping for breath, constipation, feces in rectum, abnormally hard consistency disease: What are the symptoms of cholecystitis?---

symptom: I am having the following symptoms: moan, nausea, pain abdominal, Murphy's sign, flatulence, colic abdominal, pain, ascites, diarrhea, qt interval prolonged, cardiovascular event, groggy,

sinus rhythm, gasping for breath, constipation, feces in rectum, abnormally hard consistency. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

cholecystitis.---

symptom: The following are the symptoms of hernia hiatal: pain abdominal, fatigability, prodrome, vomiting, nausea, myalgia, hyponatremia, sore to touch, general discomfort, dyspnea on exertion,

asterixis, guaiac positive, numbness of hand, headache, photophobia    disease: What are the symptoms of hernia hiatal?---

symptom: I am having the following symptoms: pain abdominal, fatigability, prodrome, vomiting, nausea, myalgia, hyponatremia, sore to touch, general discomfort, dyspnea on exertion, asterixis, guaiac positive, numbness of hand, headache, photophobia. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hernia hiatal.---

symptom: The following are the symptoms of migraine    disorders: ambidexterity, vomiting, dizziness, numbness, nausea, fever, splenomegaly    disease: What are the symptoms of migraine disorders?---

symptom: I am having the following symptoms: ambidexterity, vomiting, dizziness, numbness, nausea, fever, splenomegaly. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with migraine disorders.---

symptom: The following are the symptoms of pancytopenia: hypoproteinemia, fatigue, haemorrhage, fatigability, cushingoid habitus, stool color yellow, colic abdominal    disease: What are the symptoms of pancytopenia?---

symptom: I am having the following symptoms: hypoproteinemia, fatigue, haemorrhage, fatigability, cushingoid habitus, stool color yellow, colic abdominal. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with pancytopenia.---

symptom: The following are the symptoms of biliary calculus: vomiting, nausea, pain abdominal, pain, cushingoid habitus, ascites, thicken, sore to touch, diarrhea, apyrexial, palpitation    disease: What are the symptoms of biliary calculus?---

symptom: I am having the following symptoms: vomiting, nausea, pain abdominal, pain, cushingoid habitus, ascites, thicken, sore to touch, diarrhea, apyrexial, palpitation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with biliary calculus.---

symptom: The following are the symptoms of tachycardia sinus: left atrial hypertrophy, sweating increased, alcohol binge episode, pressure chest, scar tissue, cardiovascular event, orthostasis, shortness of breath, t wave inverted, vomiting, pain abdominal    disease: What are the symptoms of tachycardia sinus?---

symptom: I am having the following symptoms: left atrial hypertrophy, sweating increased, alcohol binge episode, pressure chest, scar tissue, cardiovascular event, orthostasis, shortness of breath, t wave inverted, vomiting, pain abdominal. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with tachycardia sinus.---

symptom: The following are the symptoms of ileus: abscess bacterial, abdomen acute, air fluid level, catching breath, abdominal tenderness, nausea, sore to touch, flatulence, diarrhea, mass of body structure, apyrexial, constipation, thicken, gravida 0, pain abdominal    disease: What are the symptoms of ileus?---

symptom: I am having the following symptoms: abscess bacterial, abdomen acute, air fluid level, catching breath, abdominal tenderness, nausea, sore to touch, flatulence, diarrhea, mass of body structure, apyrexial, constipation, thicken, gravida 0, pain abdominal. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with ileus.---

symptom: The following are the symptoms of adhesion: flatulence, pain, large-for-dates fetus, para 1, vomiting, lung nodule, breech presentation, shortness of breath, decreased body weight, immobile, unsteady gait, hallucinations visual, feeling suicidal    disease: What are the symptoms of adhesion?---

symptom: I am having the following symptoms: flatulence, pain, large-for-dates fetus, para 1, vomiting, lung nodule, breech presentation, shortness of breath, decreased body weight, immobile,

unsteady gait, hallucinations visual, feeling suicidal. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with adhesion.---

symptom: The following are the symptoms of delusion: loose associations, giddy mood, feeling hopeless, agitation, hallucinations auditory, irritable mood, sleeplessness, neologism, homicidal thoughts, disturbed family, worry, decompensation, verbally abusive behavior, catatonia, suicidal, terrify, blackout, weepiness, impaired cognition, irritable mood, agitation disease: What are the symptoms of delusion?---

symptom: I am having the following symptoms: loose associations, giddy mood, feeling hopeless, agitation, hallucinations auditory, irritable mood, sleeplessness, neologism, homicidal thoughts, disturbed family, worry, decompensation, verbally abusive behavior, catatonia, suicidal, terrify, blackout, weepiness, impaired cognition, irritable mood, agitation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with delusion.---

symptom: The following are the symptoms of affect labile: extreme exhaustion, sleeplessness, enuresis, patient non compliance, feeling hopeless, hallucinations visual, bedridden, prostatism disease: What are the symptoms of affect labile?---

symptom: I am having the following symptoms: extreme exhaustion, sleeplessness, enuresis, patient non compliance, feeling hopeless, hallucinations visual, bedridden, prostatism. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with affect labile.---

symptom: The following are the symptoms of decubitus ulcer: systolic murmur, frail, fever disease: What are the symptoms of decubitus ulcer?---

symptom: I am having the following symptoms: systolic murmur, frail, fever. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with decubitus ulcer.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is  
dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the  
patient is dealing with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is  
dealing with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with  
GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
dealing with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
dealing with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing  
with GERD.---

symptom: The following are the symptoms of GERD: acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing  
with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
dealing with GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
GERD.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of  
Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed  
indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: itching, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, yellowing of eyes    disease: What are the symptoms of Chronic

cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing

with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness   disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations   disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:  
  
What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the  
  
disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain  
  
hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1  
disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1    disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body   disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain   disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body   disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain   disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract  
  
infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of  
  
Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness   disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:  
  
What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the  
  
disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain  
  
hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1  
disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feet, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feet, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1    disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract  
  
infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of  
  
Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness   disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations   disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:  
  
What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the  
  
disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain  
  
hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1  
disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feet, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feet, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1    disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract  
  
infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of  
  
Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness   disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting   urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting   urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations   disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:  
  
What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the  
  
disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain  
  
hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1  
disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1    disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum   disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium   disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history   disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?   disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding   disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is

dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of

Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain   disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain   disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body   disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain   disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections   disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf    disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?    disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract  
  
infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails    disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze    disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches    disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes    disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is  
  
dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain    disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of  
  
Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver

failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma,

stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain   disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite,

polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria.

What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:

What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the

disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain

hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the

patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed

indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain    disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness   disease: What are the symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting    urination    disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting    urination. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching    disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts    disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria    disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body    disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1

disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the

disease ? disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled

lymph nodes, malaise, phlegm, chest pain, blood in sputum disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes,

malaise, phlegm, chest pain, blood in sputum. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes,

sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum disease: What are the

symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus disease: What are the

symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation    disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation    disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations    disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking    disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ?    disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking    disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness    disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?    disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scurring    disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scurring. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine    disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches   disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes   disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain   disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes   disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination   disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching   disease: What are the symptoms of Peptic

ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts   disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria   disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea   disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum   disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration   disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances   disease: What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance   disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body  
disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body    disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red spots over body. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain    disease: What are the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain  
disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections    disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion, receiving unsterile injections. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history    disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes    disease: What are the symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1    disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus

pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum   disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus   disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain   disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf   disease: What are the symptoms of Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation   disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities, depression, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation   disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal menstruation. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability, palpitations   disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine disease: What are the symptoms of Urinary tract

infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ? disease: The symptoms listed

indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ? disease: The symptoms listed indicates that the

patient is dealing with Impetigo.---

symptom: The following are the symptoms of Fungal infection: itching, skin rash, nodal skin eruptions, dischromic patches disease: What are the symptoms of Fungal infection?---

symptom: I am having the following symptoms: itching, skin rash, nodal skin eruptions, dischromic patches. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Fungal infection.---

symptom: The following are the symptoms of Allergy: continuous sneezing, shivering, chills, watering from eyes disease: What are the symptoms of Allergy?---

symptom: I am having the following symptoms: continuous sneezing, shivering, chills, watering from eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Allergy.---

symptom: The following are the symptoms of GERD: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain disease: What are the symptoms of GERD?---

symptom: I am having the following symptoms: stomach pain, acidity, ulcers on tongue, vomiting, cough, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with GERD.---

symptom: The following are the symptoms of Chronic cholestasis: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the symptoms of Chronic cholestasis?---

symptom: I am having the following symptoms: itching, vomiting, yellowish skin, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Chronic cholestasis.---

symptom: The following are the symptoms of Drug Reaction: itching, skin rash, stomach pain, burning micturition, spotting urination disease: What are the symptoms of Drug Reaction?---

symptom: I am having the following symptoms: itching, skin rash, stomach pain, burning micturition, spotting urination. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Drug Reaction.---

symptom: The following are the symptoms of Peptic ulcer disease: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching disease: What are the symptoms of Peptic ulcer disease?---

symptom: I am having the following symptoms: vomiting, indigestion, loss of appetite, abdominal pain, passage of gases, internal itching. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Peptic ulcer disease.---

symptom: The following are the symptoms of AIDS: muscle wasting, patches in throat, high fever, extra marital contacts disease: What are the symptoms of AIDS?---

symptom: I am having the following symptoms: muscle wasting, patches in throat, high fever, extra marital contacts. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with AIDS.---

symptom: The following are the symptoms of Diabetes : fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria disease: What are the symptoms of Diabetes ?---

symptom: I am having the following symptoms: fatigue, weight loss, restlessness, lethargy, irregular sugar level, blurred and distorted vision, obesity, excessive hunger, increased appetite, polyuria. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Diabetes .---

symptom: The following are the symptoms of Gastroenteritis: vomiting, sunken eyes, dehydration, diarrhoea    disease: What are the symptoms of Gastroenteritis?---

symptom: I am having the following symptoms: vomiting, sunken eyes, dehydration, diarrhoea. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with  
  
Gastroenteritis.---

symptom: The following are the symptoms of Bronchial Asthma: fatigue, cough, high fever, breathlessness, family history, mucoid sputum    disease: What are the symptoms of Bronchial Asthma?---

symptom: I am having the following symptoms: fatigue, cough, high fever, breathlessness, family history, mucoid sputum. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Bronchial Asthma.---

symptom: The following are the symptoms of Hypertension : headache, chest pain, dizziness, loss of balance, lack of concentration    disease: What are the symptoms of Hypertension ?---

symptom: I am having the following symptoms: headache, chest pain, dizziness, loss of balance, lack of concentration. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Hypertension .---

symptom: The following are the symptoms of Migraine: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances    disease:  
  
What are the symptoms of Migraine?---

symptom: I am having the following symptoms: acidity, indigestion, headache, blurred and distorted vision, excessive hunger, stiff neck, depression, irritability, visual disturbances. What could be the  
  
disease ?    disease: The symptoms listed indicates that the patient is dealing with Migraine.---

symptom: The following are the symptoms of Cervical spondylosis: back pain, weakness in limbs, neck pain, dizziness, loss of balance    disease: What are the symptoms of Cervical spondylosis?---

symptom: I am having the following symptoms: back pain, weakness in limbs, neck pain, dizziness, loss of balance. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Cervical spondylosis.---

symptom: The following are the symptoms of Paralysis (brain hemorrhage): vomiting, headache, weakness of one body side, altered sensorium    disease: What are the symptoms of Paralysis (brain  
  
hemorrhage)?---

symptom: I am having the following symptoms: vomiting, headache, weakness of one body side, altered sensorium. What could be the disease ?    disease: The symptoms listed indicates that the  
  
patient is dealing with Paralysis (brain hemorrhage).---

symptom: The following are the symptoms of Jaundice: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain    disease: What are the symptoms of Jaundice?---

symptom: I am having the following symptoms: itching, vomiting, fatigue, weight loss, high fever, yellowish skin, dark urine, abdominal pain. What could be the disease ?    disease: The symptoms listed  
  
indicates that the patient is dealing with Jaundice.---

symptom: The following are the symptoms of Malaria: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain    disease: What are the symptoms of Malaria?---

symptom: I am having the following symptoms: chills, vomiting, high fever, sweating, headache, nausea, diarrhoea, muscle pain. What could be the disease ?    disease: The symptoms listed indicates  
  
that the patient is dealing with Malaria.---

symptom: The following are the symptoms of Chicken pox: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body

disease: What are the symptoms of Chicken pox?---

symptom: I am having the following symptoms: itching, skin rash, fatigue, lethargy, high fever, headache, loss of appetite, mild fever, swelled lymph nodes, malaise, red spots over body. What could be

the disease ? disease: The symptoms listed indicates that the patient is dealing with Chicken pox.---

symptom: The following are the symptoms of Dengue: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle

pain, red spots over body disease: What are the symptoms of Dengue?---

symptom: I am having the following symptoms: skin rash, chills, joint pain, vomiting, fatigue, high fever, headache, nausea, loss of appetite, pain behind the eyes, back pain, malaise, muscle pain, red

spots over body. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Dengue.---

symptom: The following are the symptoms of Typhoid: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain disease: What are

the symptoms of Typhoid?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, high fever, headache, nausea, constipation, abdominal pain, diarrhoea, toxic look (typhos), belly pain. What could be the disease

? disease: The symptoms listed indicates that the patient is dealing with Typhoid.---

symptom: The following are the symptoms of hepatitis A: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain

disease: What are the symptoms of hepatitis A?---

symptom: I am having the following symptoms: joint pain, vomiting, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, diarrhoea, mild fever, yellowing of eyes, muscle pain. What could

be the disease ? disease: The symptoms listed indicates that the patient is dealing with hepatitis A.---

symptom: The following are the symptoms of Hepatitis B: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood

transfusion, receiving unsterile injections disease: What are the symptoms of Hepatitis B?---

symptom: I am having the following symptoms: itching, fatigue, lethargy, yellowish skin, dark urine, loss of appetite, abdominal pain, yellow urine, yellowing of eyes, malaise, receiving blood transfusion,

receiving unsterile injections. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hepatitis B.---

symptom: The following are the symptoms of Hepatitis C: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history disease: What are the symptoms of Hepatitis C?---

symptom: I am having the following symptoms: fatigue, yellowish skin, nausea, loss of appetite, yellowing of eyes, family history. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Hepatitis C.---

symptom: The following are the symptoms of Hepatitis D: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes disease: What are the

symptoms of Hepatitis D?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes. What could be the disease ?

disease: The symptoms listed indicates that the patient is dealing with Hepatitis D.---

symptom: The following are the symptoms of Hepatitis E: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding    disease: What are the symptoms of Hepatitis E?---

symptom: I am having the following symptoms: joint pain, vomiting, fatigue, high fever, yellowish skin, dark urine, nausea, loss of appetite, abdominal pain, yellowing of eyes, acute liver failure, coma, stomach bleeding. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Hepatitis E.---

symptom: The following are the symptoms of Alcoholic hepatitis: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1  
disease: What are the symptoms of Alcoholic hepatitis?---

symptom: I am having the following symptoms: vomiting, yellowish skin, abdominal pain, swelling of stomach, distention of abdomen, history of alcohol consumption, fluid overload.1. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Alcoholic hepatitis.---

symptom: The following are the symptoms of Tuberculosis: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum    disease: What are the symptoms of Tuberculosis?---

symptom: I am having the following symptoms: chills, vomiting, fatigue, weight loss, cough, high fever, breathlessness, sweating, loss of appetite, mild fever, yellowing of eyes, swelled lymph nodes, malaise, phlegm, chest pain, blood in sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Tuberculosis.---

symptom: The following are the symptoms of Common Cold: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain    disease: What are the symptoms of Common Cold?---

symptom: I am having the following symptoms: continuous sneezing, chills, fatigue, cough, high fever, headache, swelled lymph nodes, malaise, phlegm, throat irritation, redness of eyes, sinus pressure, runny nose, congestion, chest pain, loss of smell, muscle pain. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Common Cold.---

symptom: The following are the symptoms of Pneumonia: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum    disease: What are the symptoms of Pneumonia?---

symptom: I am having the following symptoms: chills, fatigue, cough, high fever, breathlessness, sweating, malaise, phlegm, chest pain, fast heart rate, rusty sputum. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Pneumonia.---

symptom: The following are the symptoms of Dimorphic hemorrhoids(piles): constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus    disease: What are the symptoms of Dimorphic hemorrhoids(piles)?---

symptom: I am having the following symptoms: constipation, pain during bowel movements, pain in anal region, bloody stool, irritation in anus. What could be the disease ?    disease: The symptoms listed indicates that the patient is dealing with Dimorphic hemorrhoids(piles).---

symptom: The following are the symptoms of Heart attack: vomiting, breathlessness, sweating, chest pain    disease: What are the symptoms of Heart attack?---

symptom: I am having the following symptoms: vomiting, breathlessness, sweating, chest pain. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with

Heart attack.---

symptom: The following are the symptoms of Varicose veins: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf disease: What are the symptoms of

Varicose veins?---

symptom: I am having the following symptoms: fatigue, cramps, bruising, obesity, swollen legs, swollen blood vessels, prominent veins on calf. What could be the disease ? disease: The symptoms

listed indicates that the patient is dealing with Varicose veins.---

symptom: The following are the symptoms of Hypothyroidism: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen

extremities, depression, irritability, abnormal menstruation disease: What are the symptoms of Hypothyroidism?---

symptom: I am having the following symptoms: fatigue, weight gain, cold hands and feets, mood swings, lethargy, dizziness, puffy face and eyes, enlarged thyroid, brittle nails, swollen extremities,

depression, irritability, abnormal menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypothyroidism.---

symptom: The following are the symptoms of Hyperthyroidism: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability,

abnormal menstruation disease: What are the symptoms of Hyperthyroidism?---

symptom: I am having the following symptoms: fatigue, mood swings, weight loss, restlessness, sweating, diarrhoea, fast heart rate, excessive hunger, muscle weakness, irritability, abnormal

menstruation. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hyperthyroidism.---

symptom: The following are the symptoms of Hypoglycemia: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred

speech, irritability, palpitations disease: What are the symptoms of Hypoglycemia?---

symptom: I am having the following symptoms: vomiting, fatigue, anxiety, sweating, headache, nausea, blurred and distorted vision, excessive hunger, drying and tingling lips, slurred speech, irritability,

palpitations. What could be the disease ? disease: The symptoms listed indicates that the patient is dealing with Hypoglycemia.---

symptom: The following are the symptoms of Osteoarthritis: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking disease: What are the symptoms of Osteoarthritis?---

symptom: I am having the following symptoms: joint pain, neck pain, knee pain, hip joint pain, swelling joints, painful walking. What could be the disease ? disease: The symptoms listed indicates that

the patient is dealing with Osteoarthritis.---

symptom: The following are the symptoms of Arthritis: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking disease: What are the symptoms of Arthritis?---

symptom: I am having the following symptoms: muscle weakness, stiff neck, swelling joints, movement stiffness, painful walking. What could be the disease ? disease: The symptoms listed indicates

that the patient is dealing with Arthritis.---

symptom: The following are the symptoms of (vertigo) Paroxysmal Positional Vertigo: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness disease: What are the

symptoms of (vertigo) Paroxysmal Positional Vertigo?---

symptom: I am having the following symptoms: vomiting, headache, nausea, spinning movements, loss of balance, unsteadiness. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with (vertigo) Paroxysmal Positional Vertigo.---

symptom: The following are the symptoms of Acne: skin rash, pus filled pimples, blackheads, scarring   disease: What are the symptoms of Acne?---

symptom: I am having the following symptoms: skin rash, pus filled pimples, blackheads, scarring. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Acne.---

symptom: The following are the symptoms of Urinary tract infection: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine   disease: What are the symptoms of Urinary tract infection?---

symptom: I am having the following symptoms: burning micturition, bladder discomfort, foul smell of urine, continuous feel of urine. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Urinary tract infection.---

symptom: The following are the symptoms of Psoriasis: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails   disease: What are the symptoms of Psoriasis?---

symptom: I am having the following symptoms: skin rash, joint pain, skin peeling, silver like dusting, small dents in nails, inflammatory nails. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Psoriasis.---

symptom: The following are the symptoms of Impetigo: skin rash, high fever, blister, red sore around nose, yellow crust ooze   disease: What are the symptoms of Impetigo?---

symptom: I am having the following symptoms: skin rash, high fever, blister, red sore around nose, yellow crust ooze. What could be the disease ?   disease: The symptoms listed indicates that the patient is dealing with Impetigo.---
